

# Abbotsford, Sumas & Matsqui News

Thirteenth Year. No. 19

Abbotsford, B.C., Wednesday, May 6th, 1936

Ten Cents per Month.

## GIFFORD

Miss Florence Russell has returned to her home in Agassiz after visiting Mr. and Mrs. J. W. Westlin.

Miss Winnie Nicholson has secured a position at Powell River.

Mr. and Mrs. A. O'mara have taken up residence at Harrison Bay. Mrs. O'mara is the former Mildred Ostrom, eldest daughter of Mrs. A. Ostrom and the late Mrs. Ostrom, Harris road and in Vancouver.

Miss Marion Smith has obtained a situation in Vancouver.

Mrs. P. Erickson has returned after a visit with her daughter and son-in-law, Mr. and Mrs. R. S. Wright of Vancouver.

The funeral of little Shirley Anne, one-year-old daughter of Mr. and Mrs. R. C. Sibbald, Gifford, who passed away on April 29, was held on Saturday last, May 2, at Hazelwood cemetery, Rev. Mr. Scratch of Abbotsford officiating.

## MRS. E. JACOBSON HONORED BY WINNIPEG FRIENDS

Mrs. George W. Hall of Winnipeg, Man. was a charming hostess Tuesday evening of last week, assisted by Miss Violet Butterfield, in honor of Mrs. Earl Jacobson, whose wedding took place recently at Matsqui, B.C. Lighted ivory tapers, tulip bows, roses and spring blooms added a pleasant touch to the occasion.

On behalf of those present, little Marjorie Markham and George (Skipper) Hall presented the guest of honor with a beautiful silver tea service. Accompanying the gift was a list of the invited guests, numbering twenty-seven, printed on a white satin ribbon.

Incorporation of the Central Valley Fair Association under the B.C. Societies Act is now effected and Secretary Kettle has received the charter from Victoria. During the summer the cattle sheds, started on Jubilee park, will be completed. Total dimensions of these will be 24x160 feet. Fair dates this year are Sept. 10 and 11, and a full two-day event will be attempted. Encouraged by last year's response to the first event, President Smith and Secretary Kettle, the two indefatigable promoters from Poplar, will make a canvas of the town for assistance to the event.

## MATSQUI

Municipal Clerk Pennington is visiting friends in Victoria this week, and is recovered sufficiently to resume his duties shortly.

Miss Lily Smith has left for three weeks visit with relatives in Winnipeg and Ottawa. Her brother, Cyril Smith, who is employed by the Dominion Department of Mines, will return with her.

Miss Margaret Lehman of Vancouver spent the week-end with her sister, Miss Elspeth Lehman.

Miss Charlotte Beharrell has returned from Vancouver where she attended the University of B. C.

Carpenters are building an extension to the Clerk's offices at Matsqui municipal hall.

Dr. C. O. Swanson, former professor and head of the department of geology at Michigan Technical School, has been appointed professor of mineralogy and petrography in the department of geology at the University of British Columbia. Dr. Swanson is son-in-law of Mrs. Mary Houghton.

Relief disbursements in Matsqui total \$5,000 to \$5,500 monthly, and are distributed to 260 families.

## HIGHLAND BULB GROWERS

### HARD HIT BY TARIFF FACT

Bulb growers of the Bradner and Mt. Lehman districts, who have been steadily building up an excellent business for their products in past years, have received a serious setback this year, owing to competition from American growers. The local florists, who must raise their blooms in expensive hothouses, with a large expense for fuel, find it impossible to compete with growers from further south, who owing to a warmer climate, are able to grow their blooms at less expense, and consequently market them at a much lower cost.

Hitherto, tariffs have protected the Canadian growers, but the McKenzie King pact with the United States government enabled American bulb growers to flood the Canadian markets with blooms paying practically no tariff charges.

"With more blooms than usual, of fine quality and appearance, we did not realize enough to pay our fuel bill for the hothouses," states a Bradner bulb grower. "Under normal marketing conditions, all florists in the district would have enjoyed a good year, but American competition brought prices down to such a level that any profits were impossible."

Born.—To Mr. and Mrs. Jago, of Bradner, in the local hospital on April 30, a son.

H. Hansen's new barber shop, adjacent to The News building, is now completed, and presents a very attractive appearance. Well-equipped inside, with all modern features, the exterior is pleasingly stuccoed. Neils Olund was contractor.

## SUMAS DISTRICT

Fines of \$5 each were imposed upon a Langley and a Durieu resident in Sumas police court last week for obstructing a highway. Each of the men had parked their trucks in such a manner as to obstruct traffic at Huntingdon the previous Sunday evening. Provincial Constable Gauld informs The News that he had previously warned motorists about this kind of traffic law infraction, which constituted a danger to other motorists.

Mr. and Mrs. James Marshall, formerly of Huntingdon, were recent guests of Mr. and Mrs. Morton, De-roche.

Claim for \$3,500 damage caused by fire which swept through his property was brought by Edgar H. Boley, Sumas Prairie farmer, against Clayburn Co. Ltd. in Judge Howay's court this week. Appellant contends the fire was started on the brick company's track, when slashings were burned, and that valuable young and old timber was destroyed and the soil damaged so that reforestation cannot be continued. Hardwood was cut upon the Boley property for the past 20 years, it is claimed, hardwood having been logged off it in 1916 and 1924. Young timber which would be ready for cutting in a few years is destroyed, and also some of the fences, appellant states.

Decision in the George A. Moody vs. Sumas Dyking Commission case heard in Vancouver last week was adverse to the Sumas lake area farmer. Mr. Moody and family have moved to Vancouver, having left their farm on the old highway near Barrowtown.

Miss Isabel Mathers of Stratton left on Saturday for a visit with her uncle at Lintlaw, Sask.

## DUNCAN SINCLAIR

Duncan Sinclair, one of Matsqui high land's earliest settlers, passed away in New Westminster on Saturday at the age of 80 years. He had resided in the district for 40 years, coming here from Ontario, where he was born, and settling on Ross road.

He is survived by two sons and four daughters. Two daughters, Christina and Katherine, and one son, Leonard, reside at the family home.

Funeral services will be conducted in Aldergrove United church tomorrow and interment will be made in Aberdeen cemetery.

## ABBOTSFORD

Mr. and Mrs. E. Dibble and family, who have resided in the district for the past eight years, leave this week for Norton, King's County, New Brunswick, where they will operate a farm. Their property here, on the highway west of Abbotsford, has been purchased by C. Grant of New Westminster, a member of the government road crew.

Mrs. A. M. King is visiting with her son-in-law and daughter, Mr. and Mrs. Millar, in Portland, Ore.

Following the departure of Rev. G. Turpin to Vancouver, where he will take charge of Trinity United church, the United Church Board of Rosedale, East Chilliwack and Cheam have extended an invitation to Rev. T. S. Paton of Hatzic to become their minister. Mr. Paton was for several years in charge of the Trinity United church in Abbotsford.

Mr. J. Gilmour has purchased a new car.

Born.—To Mr. and Mrs. J. McGee, Abbotsford, in the M.S.A. hospital, on May 4, a son.

Born.—To Mr. and Mrs. J. S. Karsnelson, Abbotsford, in the local hospital, a daughter.

A. Crouter has moved into the Plaxton house and J. Burns into the Crouter house.

Special Free Permanent Offer at The Marigold—good for another week

## ABBOTSFORD SCHOOL

Proficiency list for April:

Grade 8—Roberta Carsell, Joan Morrison, Mavis Hay, Marguerite Ward, Effie Roberts, Donna Fraser.

Grade 7—Dorothy Leary, Ethel Armstrong, Lorna Daly, Eva Armstrong, Peggy Leslie, Mae Atkinson.

Grade 6—Teddy Lawrence, Beverly McDonald, Eric Gosling, Gordon Harvey, Joan Hayne, Kenneth Grimley.

Grade 5—Billy Fraser, Tom Rukus, Annie Smith and Mark Jackson, equal Dorothy Parsons.

Grade 3B—Mable Baese, Donald Latter, Naida Daly, Nisbet McPhail, Bennie Biro.

Grade 2A—Jane Bather, Leonard Wallace, Jennie Donaldson, Joyce Marshall, Jennie Meeks.

Grade 1—Rudy Runzer, Jessie Bader, Elsie Berg, Jacqueline Gray, Neil Richier.

## MEETING NOTICE

A meeting of the ratepayers and residents of Abbotsford Village and environs will be held in the auditorium of the Sumas-Abbotsford High School on Thursday evening, May 7th at 8 o'clock, to discuss plans for the erection of general shops and a gymnasium-auditorium on the high-school grounds to serve the schools of the Matsqui-Sumas-Abbotsford Demonstration Area.

Sumas Prairie resident, Died Sunday

## Library Notes

### THE PIONEER

The Pioneer always commands respect and the experiences recorded in these three biographies indeed merit that admiration.

In "Old Jules" Mari Sandoz tells in vivid and entertaining style the story of her father's erratic life from the time he deserted the study of medicine in Switzerland for pioneering in Nebraska to his death as the "grand old man" of the state.

Most of "A Child Went Forth" is concerned with the author's childhood memories of farm life in New Hampshire, pioneering in Dakota and ranching in California. Written by Helen M. Doyle, who attempts a picture of the gold rush of '49 and of San Francisco in its hey-day.

"From Sunrise to Evening Star" takes us all the way to South Africa. As a child, Mrs. King made the long wagon journey from the Cape to Natal in the days when the railroad was only a remote dream. She writes of the Boer War and of Botha, who was her brother-in-law.

## TALENT DISCLOSED AT ANNUAL SCHOOL CONCERT IN MATSQUI

Histrionic talent of surprising quality was revealed by Matsqui High School pupils last Friday evening to a large and appreciative audience, the occasion being the annual concert of the student body.

An acceptable curtain-raiser "The Allegiance March" was played by the school's male orchestra, organized but two months ago. The second number, "Harbour of Dreams" was not quite suited to juvenile enthusiasm, but in the next number "The Amateur Hour" this was compensated for. This original idea was conceived by Charles Kench and Bob Rottluff and their group, and its successful execution is to be credited to the co-operation of the other students.

### Modernistic Stage Setting

Stage setting was distinctively modernistic in a scheme of black-and-white. The recording machine gave honours of the performance to Sailor Allen Crist's singing of "We Saw the Sea." Good competition was provided by Harry Hansen, for his playing of Godard's "Second Mazurka" and the group of singers and dancers following. Nora Derbyshire, Vivian Crist, Eileen Beharrell, Victor Hansen, Bill Norrish, Don Morris, Marion Green, George Seldon, Doris Vosburgh, Doris Hodgins and Ian Sutherland.

The orchestra's twin, the Glee Club, though of the "weaker" sex, proved a little stronger for its immature age, and survived the strain of three songs without disaster.

In contrast with the hilarity of the "Amateur Hour" was the solemn tone of "The Bishop's Candlesticks" the first play of the evening. Its effectiveness was mainly due to its even tempo, and to the marked contrast between the vigour of Chas. Kench's acting as the convict, and the sincere, restrained mien of Gordon Adams in the role of the bishop. The female roles were adequately taken by Melvina Gibson, as the bishop's over-precise sister, and by Doris Norrish as the timid little servant girl.

### Comedy Well Chosen

The merry mood of the audience was restored by the well-chosen comedy "The Dear Departed." Humour and mock-tragedy were held in balance by all the players, Francis Wilson as the calculating Mrs. Slater, Genot Machell, Vivian Crist, George Seldon, Jessie Peachey and Victor Hansen. To the delight of the audience and the player himself, the difficult role of the grandfather was played with a great deal of aplomb by Genot Machell.

Eileen Beharrell, the school's soloist sang "Skye Boat Song" and the versatility of Vivian Crist, the school's indispensable pianiste was finally established by her two solos "Summersong" and "Sunshine."

27th April, 1936, Additional Cash Payment and Mortgage Release . . . . . \$ 568.31

Total Received by borrower . . . . . \$1568.31

Total paid by borrower by monthly installments . \$1819.38

Interest cost over 6 years on loan of \$1000 . . . \$ 251.07

## WORLD HAPPENINGS BRIEFLY TOLD

General Baptiste Estienne, inventor of the French tanks whose lumbering charges helped break the back of German resistance in the last days of the war, is dead. He was 75.

The Canadian wheat board disposed of the last of its wheat held in the United States on April 6 when its holdings at Toledo, Ohio, were disposed of to an export house.

Punishment was visited swiftly upon industrial workers who failed to vote in the March 29 Reichstag elections. They were summarily dismissed from their jobs.

King Edward has approved a recommendation that during his reign the Saturday before Whitsunday shall continue to be the day fixed for the king's birthday holiday in the civil service.

With a view to imparting education through the medium of talks a proposition has been put forward to instal a set of radio receivers in all the 350 municipal schools of Bombay, India.

A complete embargo on exports from the United States on scrap tin, large quantities of which recently have been shipped to Japan, was ordered by Secretary of State Hull for the period from April 16 until July 1.

The late Rudyard Kipling left an estate of \$155,288 (\$775,000), gross value, probate of his will showed. The house and land at Burwash and the income from his residual estate were left to his widow.

School children throughout the province of Hsueh, China, are contributing their coppers (one-ninth of a Canadian cent) toward a fund for the purchase of a golden sword for the nation's generalissimo, Chiang Kai-Shek.

William C. Gussow, of Boston Tech., Cambridge, Mass., and formerly of Saskatchewan University, Saskatoon, has been awarded a research fellowship in geology for 1936-37, it was announced at Ottawa by the fellowship board of the Royal Society of Canada.

## Cost Of Grain Shipping

Figures Given For Transportation From Alberta To Vancouver

It costs approximately 30.5 cents a bushel to cover handling, insurance and transportation charges from Alberta country elevator points to British ports. E. A. Ursell, statistician for the board of grain commissioners is responsible for the compilation based on shipments via Vancouver.

Handling at country elevator including insurance against fire, 15 days storage, official inward inspection, weighing and registration fees and selling to exporter on Vancouver market amount to 3.75 cents. Railway freight rate from average western points shipping via Vancouver-New Westminster terminals, 13.5 cents. Handling at terminal elevator including fire and explosion, insurance and 15 days storage, official outward inspection, weighing and registration and loading charges, 1.5 cents.

## Were Once Welcomed

But Now Dandelion Has Become Pest To Western Cities

About forty years ago the first dandelions appeared on the railway right-of-way through a western city. The homesick easterners came to admire this reminder of their homes, but it seemed to be no one's duty to point out the condition caused by these dandelions in the east; consequently no steps were taken to prevent the spread of these flowers. Now every city in the early spring is carpeted with yellow dandelions; later on when these flowers are seeding, a wind has the appearance of fog caused by millions and millions of dandelion seed, which blows for miles in all directions, and the eradication of the dandelion pest, is the subject of learned discussion, with the hope that some scientist may sometime discover some cheap chemical solution which will destroy the dandelion without killing the grass. —Brandon Sun.

## Finland's Oldest Flower Girl

Known as Finland's most popular "flower girl," Maria Anderson has just celebrated her 107th birthday. She is the oldest inhabitant of Helsinki. She never minds how unfavorable the weather is. Every day she can be seen offering her flowers on the market square. She is full of life and humor, and still does her own shopping, cooking and washing.

Salaries of government employees in Brazil are being increased.

## Will Need Fifth Liner

Over 6,000 Reservations Made For Vimy Pilgrimage

A flotilla of five ships will convey close to 6,000 pilgrims to Vimy Ridge in July for the unveiling of Canada's national memorial there. In a consultation between Brig.-General Alex Ross, Dominion president of the Canadian Legion, and representatives of the Canadian Pacific and White Star-Cunard steamship companies, the decision was reached to augment the formerly arranged four liners by an additional one.

The capacity of the "troopships" is 5,950. Already 6,400 persons have indicated their intention of making the journey; but the expectation is that before the date of embarkation quite a number will "drop out."

General Ross said that the 5,950 was the "absolute limit."

"We announced many weeks ago that the deadline for registrations would be March 12," he said, "and it naturally follows that all persons who signified their intention of taking part in the pilgrimage and had complied with the requirements as on that date would receive first consideration. Those who came in after must of necessity be placed on a waiting list, their expectations being dependent solely upon whatever vacancies result from cancellations."

The Legion head announced that Col. D. E. McIntyre, D.S.O., M.C., of Owen Sound, had been placed in charge of "pilgrimage movements." Col. McIntyre, with a staff which will be furnished him, will co-operate with those responsible for the actual moving of this pilgrim host to ensure no slip up in the program.

Col. McIntyre was general staff officer, first grade, of the 2nd Canadian division. He served as intelligence officer of the 28th battalion, was advanced to the staff and became I.O. of the 4th Canadian infantry brigade, later proceeding to division.

## A New Expedition

Glacier Priest Hopes To Measure Ice On Greenland's Mountains

Father Bernard R. Hubbard, famed as the "glacier priest" for his scientific discoveries in the Arctic, is preparing a new expedition. He hopes shortly to measure the depth of ice on Greenland's mountains. Admiral Richard Byrd and other explorers claim that the ice caps in Greenland and in the Antarctic are more than 10,000 feet deep. Father Hubbard believes they are not more than 2,000 feet. To prove this he is going to Alaska to put his theories to the test on the Takue Glacier. Snow and ice piling up creature pressure, he argues. Pressure creates heat—and thus a certain proportion of the snow and ice is perpetually melting away, keeping the depth of the ice belt at an average of 2,000 feet. Father Hubbard and his party will have to traverse the treacherous Taku and Inklin Rivers with their dangerous rapids, ice menace and rock strewn beds.

## Really Had A Grievance

Story Told About One Relief Worker In New York

Those who are prone to find fault with the "speed" at which welfare workers accomplish their tasks, in return for relief vouchers, will appreciate this one from the New York Mirror:

One of the PWA workers on Riverside drive was complaining because he had no shovel. He finally told the foreman about it. "Gee, whiz," he gee-whizz'd, "I haven't any shovel!" "Well, whaddaya kickin' about?" was the answer, "you don't have to do any work if you ain't got no shovel!"

"I know," pouted the fellow, as he stamped both feet, "but I haven't got anything to lean on—like the other guys!"

## Finns Learning English

Believe It To Be Most Important Language In World

Finns are learning English, and it may be taught in all high schools and secondary schools of Finland in place of Swedish if a proposal submitted to Parliament by the Finnish Board of Education is adopted. The necessity of a thorough knowledge of English as "the most important language in the world," is pointed out in the petition.

The Mackenzie river, Canada's longest stream, measures 2,500 miles from its mouth to its headwaters; the St. Lawrence, second longest, is 1,900 miles long.

How horrified the world is when some disaster kills a lot of people who aren't in uniform. 2146

## VICTORIA UNIVERSITY TO CELEBRATE CENTENNIAL

The one hundredth anniversary of the granting of the Royal Charter by King William IV. in 1836 to Upper Canada Academy, Cobourg, Ontario, as an institution of higher education, will be observed this fall by Victoria University, Toronto. The Upper Canada Academy changed its name to Victoria College in 1841, and this was changed to Victoria University in 1884. Victoria College conferred the first degree in Arts ever conferred in Upper Canada, in 1845. The original building of Upper Canada Academy, later Victoria College, in Cobourg, was opened in 1836 and still stands. This building is pictured in (1). Emmanuel College, the theological branch of Victoria University, was opened in Toronto in 1931 and is shown in (3) above. Victoria College (2) the Arts Faculty of Victoria University, was opened in 1892 when Victoria College federated with the University of Toronto, and moved to Toronto.

## SELECTED RECIPES

### BREAD IN 4½ HOURS

(Four Loaves)  
(About) 12 cups Purity Flour, sifted  
4 cups water  
2 tablespoons shortening (melted)  
3 tablespoons white sugar  
2 tablespoons salt  
2 compressed yeast cakes

Method: Dissolve yeast in ½ cup of lukewarm water. In the remaining liquid (which should not be above 100 degrees F.) dissolve the sugar and salt, then add yeast. Mix in sufficient flour to make a soft batter; add shortening and beat well. Stir in sufficient flour to produce dough soft enough to handle conveniently, but not sticky. (In cold weather, warm flour before using). Turn out on floured board and knead until soft and elastic. (The temperature of the dough should now be between 80 and 85 degrees F.) Place in a greased bowl, cover and let rise until it is double the original bulk; then punch down. Let rise again and, after punching down once more, divide into pieces which will half fill black sheet-iron baking pans. Round these pieces into balls and let stand a few minutes; then mould into loaves and place in greased pans. Cover and keep in warm place while rising. When double in bulk, place in oven. If the surface is pressed lightly with the finger, the slight depression thus made will remain when the loaves are ready for baking. Should the depression quickly disappear, let rising continue a little longer. Bake in hot oven of 400 to 425 degrees for 40 to 60 minutes, depending on size of loaves.

The liquid used may be plain water, potato water, milk or part milk and part water. When potato water is used, reduce the salt by amount used in cooking potatoes. If milk is used it should be scaled and cooled.

Four cups of liquid yeast (see recipe in New Purity Cook Book) may be used in place of compressed yeast. If liquid yeast is used, reduce salt accordingly.

By the above method bread may be made in about 4½ hours. Equally good bread may be made with half the amount of yeast specified, but process will take longer.

When quick results are desired, double amount of yeast.

The French government sank artesian wells in the Sahara desert, and fish spouted high into the air.

Bluing is classified as a dye because it neutralizes the yellow in clothes, thus making them white.

## Cost Of Armaments

Writer Figures Out Per Capita Cost To Each Country

When George Bernard Shaw wrote "Arms and the Man" he was not dealing with the economics of the question, but a writer in the London Morning Post figured it out that way recently.

He finds that in Canada the cost is \$1.24 a person; in New Zealand, \$1.50; Denmark, \$2.18; Australia, \$2.40; Japan, \$3.70; Belgium, \$4.10; Italy (at war), \$8; Great Britain, which defends a vast empire, \$9.50; and the United States, \$5.60.

No statistics are available for Germany. But the United States, for the first time since the war, has begun borrowing money for arms, battleships, and aircraft.

And if there is going to be an armaments race these figures will be much higher. The average British family of five pays nearly \$50 a year for defences. Obviously Great Britain has strong reasons for striving so hard for peace. — St. Thomas Times-Journal.

## Toast To The King

Orders Covering Correct Procedure Issued To Fleet

Fleet orders were issued covering the correct procedure in connection with the toast to the King.

The orders state that the health of His Majesty should be honored seated in all naval messes, whether on ship or on shore, on all occasions except when the National Anthem is played, when the toast should be drunk standing.

When toasts for foreign heads of states are included, they and that of the King should be drunk standing, whether the National Anthem is played or not, the orders provide.

The custom of drinking the loyal toast seated is said to have originated in the days of wooden warships, where accommodation was limited and there was insufficient headroom for a man to stand below decks. Any present-day visitor to the Nelson or the Victory at Portsmouth will appreciate this.

## Fellowship Awarded

Norman B. Keevil, Harvard University, Cambridge, Mass., formerly of University of Saskatchewan, Saskatoon, has been awarded a research fellowship in botany, it was announced by the fellowship board of the Royal Society of Canada. The fellowships have a value of \$1,500 and are financed by a grant from the Carnegie corporation of New York to the Royal Society.

## You Can Knit This Chair Set Quickly

Household Arts by Alice Brooks

Excellent for Fairs and Showers

### PATTERN 5561

A new Chair Set's quickly espied by family and friends when it's as lovely a knitted one as this. And Alice Brooks has designed it especially for your furniture's Summer dress-up. What matter if you are a Beginner! You can knit this simple design—easily—quickly, with humble string the only material required. You'll soon have learned the "key" design, and then you repeat—three panels for a chair back, one panel for the arm.

In pattern 5561 you will find complete instructions for making the chair set shown; an illustration of it and of all stitches needed; material requirements.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermott Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

## YOUR GARDEN

Even with a very small space, there is a big advantage in having something of a more or less permanent character like perennial flowers. With these there is something to build the rest of the garden around and there are less likely to be long blank periods when there is no bloom available. After a few years' general advice will not be needed because the gardener will go on extending here and there, specializing to some extent in favorites, just as the same persons will do in building up a private collection of books.

Lack of variety is the chief fault of the Canadian vegetable garden. Experts point out that there is no excuse for running out of lettuce early in the summer for example, when after the season for the leaf variety head lettuce could be grown and then during the hot weather the Cos type. For the "greens" enthusiast, a few plants of Swiss Chard will provide an abundance of meals. It is worth investigating as is also Broad Beans, which come along about mid-summer, and, later, Broccoli, a sort of refined cauliflower. Kohli Rabi, a refined turnip. Red cabbage and yellow tomatoes will lend interest to the regular types and provide a slightly different flavour. In many places egg plants and peppers can be grown and will be appreciated. They must be started early indoors. The red type of the latter can be used as a pimiento filling for sandwiches. In the melon family, will be muskmelons and watermelons, certain varieties of which can be produced in a surprisingly wide area of Canada. There is also the little individual Acorn or Table Queen Squash, which is a big improvement over its rather watery ancestors. Leeks add variety to the onion family and tender white radish lengthens the seasons for this vegetable. In the regular lines the season can be greatly extended by using very early as well as very late types. In garden peas, for example, the time of maturity will vary from about 50 days to 75. Instead of planting only one variety it is advisable to include at least three. Early sowing is essential, but in certain parts of the country a fall crop with a quick-growing variety is also possible. In corn, the very early Bantam types mature weeks ahead of the regular season and some of the late, both white and yellow, kinds are on until frost or even after.

Where one is fond of an abundance of bouquets, experienced gardeners advise growing a portion of these in straight rows among the vegetables or in a special cutting garden. Some well designed beds of mixed annuals are spoiled if too many flowers are picked and then again there are certain things like sweet peas, for instance, that have little attractive foliage but beautiful blooms. These might as well be grown behind the regular beds.

## Protection In England

Although Invisible It Is One Hundred Per Cent. Effective

The stories that have been appearing in the American press, about Col. Lindbergh and his family living "unguarded" at their retreat in England, are in a sense misleading.

The fact that their home is not surrounded by a cordon of uniformed police does not preclude the possibility that the police in their vicinity have taken special precautions against any possible attempt to molest them.

And they are guarded by the eternal vigilance of the highly organized and trained police force, which protects everyone in England by keeping an eye on what is going on all the time, and by that fear of the law, which English courts have put into the hearts of the criminally inclined.

Over here, where police protection is less efficiently organized and crooks thumb their noses at the law, we do not feel that we are "guarded" unless we see policemen all around us.

The invisible protection enjoyed in England is just as real and effective as it would be if it stood forth where all the world could see it.—Detroit Free Press.

## Visits Old College Rooms

King Edward Also Acted As Guide For Companions

King Edward chose the day his university trailed Cambridge for the 13th consecutive year's boat race, to pay an impromptu and informal visit to his old rooms at Magdalen college.

Like any ordinary alumnus, he visited scenes of his undergraduate days and acted as a guide for three companions, for whom he pointed out places of interest.

The king visited the college while motoring north to spend a week-end at Himley Hall, a guest of the Earl of Dudley.

I see by this paper that in some sections of the east a wife can be bought for \$5.00. Isn't that awful?

Well, I don't know. A good wife might be worth that.

## NABOB

the far distant peaks of the mountain range. But Fleming, with a look of cheerful confidence, strode to the ranch house stoop, the men following sullenly at his heels. On this sight eminence he turned to address them.

"Orliss and Kevin told me how you feel, and I don't blame you, boys. But don't think I'm not in good faith about this wages proposition. I went—"

"To hell with good faith!" broke in Gyp Vaille. "Give us hard cash!"

Plainly he was foremost in stirring up dissension. Buster Townsend's fists doubled and he seemed about to challenge Gyp until with a slight shake of the head Link warned him. "What the heck're you talkin' about? You don't work on this dam any more. I fired you this mornin' for a lazy, good-for-nothin' loafer!"

The man's powerful chest heaved. "I'm owed wages!" he roared. "An' by gosh, I mean to get my rights!"

"You're owed a good slam in the nose," Buster retorted belligerently. "Yuh tried to bust a sluice gate on us, yuh hound! Lettin' it drop 20 feet. I've a good mind to—"

"Hold on, boys!" It was news that Vaille had been discharged, that he had attempted sabotage. But Fleming disregarded this point for the moment. "I started to say," he proceeded calmly, "that Miss Hamilton and I went to Rawhide this afternoon to get your payroll."

"But didn't get it, eh?" guessed a man named Ferguson.

"We got it, all right—eight hundred dollars. But I had to stay in town to meet Buzz Hamilton. You see, I got Buzz paroled to me from prison as a surprise for his sister. I gave her the money and she started here as fast as her horse could travel."

"Boys," he said soberly, "I'm shore sorry. Helen—Miss Hamilton—got held up. Some dirty skunk wearin' a bandana mask, stepped out of the trees at Iron Spring, and stopped her at the point of a gun. She put up a game fight but of course he was stronger. He grabbed your eight hundred and got away!"

"Held up?"

"She got robbed?"

"Then our money's gone!"

These and similar exclamations broke from the crowd of irrigation dam workers. Instantly Link perceived that by phrasing it as their eight hundred dollars, he had scored a point.

"Yes, she got robbed and pretty much bruised up, fightin' for your rights. Sheriff Stephen is trillin' the cuss right now, and there's a darned good chance of nabbin' him quick. He'll sure get the limit for holdin' up a woman an' taking money earned by the sweat of your brow!"

An inspiration prompted him to stride down to Sam Walters. "Sam, I'll pay every cent I owe you if you give me time. Nobody ever said Link Fleming went back on his word. On account of that robbery I'm askin' you to trust me awhile longer."

Plainly taken back by this daring candor, Sam gnawed reflectively at a mustache end. "Yuh liable to go busted?"

"Whoever spread that story lied." The workman hesitated, conscious of all eyes on him. Then he saw Fleming's hand outstretched, and he grasped it. "Pay me up, Link, soon's yuh can. I'll wait."

His pulse speeded in triumph. Without turning from the spot, he addressed Chunky Hokanson. "Are you willing to trust me after a piece of hard luck I couldn't help?"

The other's eyes wavered. "Shore, Link." And he turned away.

But Gyp Vaille with Ferguson at his side interceded before Fleming could speak to the next man. "Yuh can pull that on those guys," Gyp sneered roughly, "but yuh can't soft soap me. I want my money an' I want it now!"

Townsend shouldered his way close, fearing trouble. "Buster," he demanded the Star Loop owner incisively, "are you sure about this hombre trying to wreck that sluice gate?"

"Plumb shore!" came the prompt answer. "Yuh dirty low-down Gila!"

### ARE YOU Miserable?

WOMEN who suffer periodically, who may have side-ache or headache, and those about to become mothers, will find Dr. Pierce's Favorite Prescription a dependable tonic. Read what Mrs. Amy Taylor of 1 McAlpine St., Toronto, Ont., said: "I was so miserable some years ago during motherhood. I seemed to ache all over and suffered from pains and headache day after day. My stomach was upset and I was all unstrung. I used three bottles of Dr. Pierce's Favorite Prescription and it built me right up so that I came through with very little pain or discomfort." Buy now! ## Natural Bran

### MAKES YOUR BAKING BETTER

• With Quaker Natural Bran you get that real, spicy, nutty flavour... the flavour that makes bran dishes so delightful, so tempting. And because it is natural bran, Quaker mixes better, rises lightly and, all 'round, gives you better baking results.

Quaker Natural Bran is healthful, too, for every member of your family. It helps rid the system of impurities naturally, gently and without irritation. Serve bran foods often... you'll find with Quaker Natural Bran, they're surprisingly economical.

There's a folder of delicious bran recipes and the valuable coupon in every package. Order your supply now.

## QUAKER Natural Bran

SINCE I'VE BEEN BAKING WITH QUAKER Natural Bran, JOHN, AND THE BOYS TOO, JUST LOVE BRAN DISHES. IT'S SO GOOD FOR THEM!

I FIND IT MUCH EASIER TO USE... RESULTS ARE BETTER TOO, IT MIXES SO EASILY AND RISES SO LIGHTLY!

IT MEANS A REAL SAVING TO BAKE WITH QUAKER Natural Bran... IT'S MADE ESPECIALLY, I UNDERSTAND, FOR THE PURPOSE.

Look for the Quaker Natural Bran display at your grocer's. He has all the things you need for the delicious recipes included in the recipe folder in each package.

## FLEMING'S FOLLY

— BY — LAWRENCE A. KEATING

### SYNOPSIS

The story opens with Link Fleming addressing a meeting of Boone County cattlemen, called together with the object of forming an irrigation company.

The meeting terminates, but Buzz Hamilton and his sister, Helen, Link and Kilgo stay behind and Helen asks Fleming questions about his irrigation plan. This angers Buzz, who accuses Fleming of trying to influence his sister and, as he asserts, ruin his "spread." Buzz shoots at Fleming in an uncontrollable fit of anger, but Buster Townsend, Link's foreman, is shot in the stomach, and Fleming is uninjured. Buzz is arrested and sentenced to three years' imprisonment.

Helen and Fleming form a partnership to provide irrigation for their own properties.

Fleming goes home and studies the plans drawn by Torney to learn whether they could be adapted to a smaller scheme suitable for his and Helen's land, and is satisfied it could be done. Feeling cold, he lights the fire and there is an explosion that wrecks the house, burns it and the plans and renders Link unconscious. He is rescued from the blaze by an employee.

Helen and Link ride to Rawhide for supplies and to obtain funds to carry out the dam project. They meet Roper, who greets Helen and offers to shop with her. Link goes to see the Sheriff, who tells him Buzz Hamilton has been paroled, and would arrive on the incoming stage, but that he thinks Link has made a mistake in getting Buzz released.

Buzz Hamilton arrives back in Rawhide while Fleming and Helen are in the bank getting a loan for payment of wages for work on the dam. Roper Kilgo and Jackpot Mell meet him and he goes into the saloon with them. By the time his sister and Link come from the bank, Buzz has had several drinks. Roper has distorted the facts concerning the dam proposal to Buzz, making it appear that Link was trying to ruin him. Buzz, inflamed with liquor and anger, tries to throttle Fleming, but is thrown to the floor. Then Helen appears and tells Fleming she has been robbed of the \$800 they had obtained from the bank.

(Now Go On With The Story)

### CHAPTER XI.—Continued

"Link," she added on sudden impulse, "do you think this dam is going to bankrupt us?"

Something in her worried tone made Fleming eager to go to any extreme to safeguard Helen and her property. "We'll come through," he said with confidence he did not quite feel. "We still have our steers to sell, and once we get cash for 'em

we'll be fixed a lot better. I'll get Marty Bush to make our beef go out first when shippin' opens day after tomorrow. And pay us cash. So, Helen, you better cut out what you're selling and get things all lined up."

He turned a little away. "I'm sorry about Buzz. I planned to give you the surprise of your life, getting him paroled. Well, it was a surprise, but not quite like I expected. Buzz came on the stage while we were with Otto Pieper, and knowing he headed right for the Half Moon, I sent you on home. By the time I got inside he was stuffed with wrong talk against us. Instead of being on our side he's plumb sure the dam won't turn out."

"Beats me," he exclaimed, scowling, "how folks can think that. Gosh, if anybody examines it, they've got to admit it'll work!"

Of course it will work, Link," She listened a moment. "I hear Buzz, I think. Please let me know what goes on."

She was about to trip inside the ranch house when he stayed her. Kevin and Orliss sat waiting on their horses two hundred feet distant but they were conversing with faces turned away. "Helen," Fleming said hesitantly, "being as we're business partners, maybe I shouldn't say this. But business aside, I sort of—I hope you like me pretty well. Do you?"

She smiled. "Need you ask?"

"Then—then would you—" He kicked self-consciously at a tuft of bunchgrass. For an instant he hesitated as if debating further speech; but then suddenly lost heart and turned to his horse.

"All right, boys," he called to Kevin and Orliss. "We'll talk wages pronto with your pals. Let's get to the Star Loop."

The three mile ride consumed but a short time. Sure enough, as they neared the two-room temporary ranch house, and the corral, bunkhouse, and small buildings, he made out more than a dozen men lounging about, smoking and watching him expectantly.

He swung from his mount and was approached by a muscular individual in overalls. Buster Townsend's usually cheerful face, round and strewn with freckles, now wore a serious look. "They're hollerin' for pay," he told Link in a low tone. "I tried to hold 'em in, but all but about ten went on strike an' said they were squattin' here till yuh hand over their dough."

"We want cash an' we want it quick!" rasped a scowling workman who guessed Townsend's words.

"We're entitled to it, ain't we boys?" put in a burly, dark-browed fellow, addressing the crowd. This man Link knew for Gyp Vaille, ex-convict and local bully. A great mass of crinkly black hair escaped Vaille's misshapen sombrero, spewing out in the careless mode of a half-breed Indian. Gyp's squinting eyes were hard and shifty, and strapped over his overalls was a pair of walnut-butted sixguns, although in his capacity of dam worker there was no need whatever to carry weapons.

Murmurs of assent greeted Vaille, and the growls of other men made a rumbling sound like thunder across

He fingered his sixgun as if itching to match his draw against Vaille's.

Gyp looked from owner to foreman and realized that gunplay was certain to result in his own defeat. Ferguson, losing courage, had slunk away. He must act at once or lose the sympathy of the workmen. Swiftly Vaille changed tactics, and with a snarled curse whipped back his brawny right arm to send a crashing blow at Fleming's chin. "I'll teach yuh!" he bellowed. "I'll teach yuh tuh cheat a—"

Sidestepping, Link lashed out with one hard fist. Crack! It caught Vaille full on the ear and sent him reeling sideways, then slamming heavily to earth. His legs and arms twitched with the jerk of unstrung nerves, and the ne'er-do-well lay panting while he sputtered vengeful oaths, momentarily too groggy to rise.

"Go back to work, boys," Link examined his skinned knuckles. "Gyp, I'll pay off every man here first, before I hand you a red cent. If you want to sue, go ahead but keep away from me. Savvy that?"

(To Be Continued)

### Interesting Mosaic Frieze

Shows How Cows Were Milked In Olden Times

Among the many interesting relics which have been unearthed during the excavations of Ur of the Chaldees, the birthplace of Abraham, is a mosaic frieze showing a procession of cows. On one side of a reed-built byre, from the door of which two calves are seen issuing, men seated on low stools are milking cows. The men sit under the cow's tail, milking the animal from behind. The calves, duly muzzled, are roped to the cow's headstall so as to encourage her to give milk. On the other side of the byre, two men, clean shaven and wearing fleece petticoats, the official dress of priests, are pouring milk through a strainer into a vessel set on the ground, while two others are collecting the strained liquid into great stone jars. This frieze is said by experts to represent a scene at a farm attached to a temple, a farm dating about 3100 B.C. employing dairy methods which might have been employed with profit in the intervening centuries.

Another find of interest to students of agriculture was a small statue representing the Goddess Bau, seated on a throne supported by geese. Bau was the patroness of the poultry farm, and her figure, square and thick-set, in a flounced and pleated dress reaching to the ankles, has an appropriately domestic look.

### Trusted Him For Fine

A man fined at Deal, England, had only \$1.50 in cash, and as this was insufficient for his fare home to Sydenham the magistrates advanced him the money for the fare and gave him a week to pay the fine. The man was A. Lake, aged 24.

Most electric fishes have rather weak batteries to keep off their enemies, but the torpedo fish and the electric eel are powerfully destructive.

The origin of Cambridge University in England is obscure. It probably grew out of a local educational movement during the twelfth century.

A grasshopper of Guiana has large glaring eye-spots that scare off enemy birds.

### Wanted To Play Safe

Man Withdrew Charge Against Son Of His Barber

Herman Gerofsky, a New York factory owner, does not believe in taking risks. After he had had Joseph Sansone arrested on a charge of theft from the factory he decided, when the case came into court, not to proceed with the charge. The magistrate asked him to explain. "Well," said Mr. Gerofsky, "Joseph's father is my barber. Twice a week I sit in his chair and my throat is at his mercy. Nevertheless the magistrate decided to hold Joseph on a charge of theft."

## WAKE UP YOUR LIVER BILE—

And You'll Jump Out of Bed in the Morning Rarin' to Go

The liver should pour out two pounds of liquid bile into your bowels daily. If this bile is not flowing freely, your food doesn't digest. It just decays in the bowels. Gas bloats up your stomach. You get constipated. Harmful poisons go into the body, and you feel sour, sunk and the world looks punk.

A mere bowel movement doesn't always get at the cause. You need something that works on the liver as well. It takes those good, old Carter's Little Liver Pills to get these two pounds of bile flowing freely and make you feel "up and up." Harmless and gentle, they make the bile flow freely. They do the work of calomel but have no calomel or mercury in them. Ask for Carter's Little Liver Pills by name! Stubbornly refuse anything else. 25c

### Canada's Sea Tonnage

Is Now Only One Third Of Fifty Years Ago

Canada's tonnage in seagoing vessels was only one-third of what it was 50 years ago, Fred Bridges, port warden at Sorel, Que., told the Ottawa branch of the Engineering Institute of Canada. Total tonnage of seagoing and inland waters vessels dropped from three per cent of the world total in 1886 to 1 1/2 per cent. In 1935, in comparison, Japan's tonnage has increased from one-half per cent. 50 years ago to six per cent. Change from sail to steam, he believed, was the cause of tonnage decline in Canada.

### Gold In New Guinea

Will Provide Mining For At Least Twenty Years

New Guinea has sufficient gold to provide mining for 20 years, according to Sir George Pearce, Australian Minister in Control of Territories, in a report to the Commonwealth Prime Minister on his return to Canberra after a visit to Papua and New Guinea. "The fields will be one of our principal producing centres for many years," he said.

### Shows Improvement

Considerable improvement has been effected in Canada in the preparation of fleece wool since 1913 when public attention was first directed to the means of quality improvement and the manner of preparation for market. At present all commercial wool in Canada is sold in the grease, and the fleeces rolled and tied intact as they are shorn.

### Little Helps For This Week

Call unto me and I will answer thee, and show thee great and mighty things which thou knowest not. Jer. 33:33.

No voice of prayer to Thee can rise. But swift as light Thy love replies; Not always what we ask, indeed, But O most kind, just what we need.

If you have any trial that seems intolerable, pray that it may be relieved or changed. There is no harm in that. We may pray for anything not wrong in itself with perfect freedom, if we do not pray selfishly. One disabled from duty by sickness may pray for health that he may do his work, or if we have a besetting sin we may pray to be delivered from it in order to serve God and man, and not be the one to mislead and annoy. But the answer to the prayer may be, as it was to Paul, not the removal of the thorn but a growing insight into its meaning and value. The voice of God in our soul may show us, as we look up to Him, that his strength is enough to enable us to bear it.

### Getting Something Done

Manitoba's Back-To-Land Movement Has Proved Success

While in other parts of the Dominion there has been a great deal of theorizing about placing unemployed on the land, the Manitoba Government has been dealing with the question in a practical way—getting something done. A report recently presented to the Western Province Legislature indicated that 772 families have been placed on the land, and that of these only 137 have failed to get along and abandoned their holdings. Expenditure on this plan to date has been \$481,776 and of this the Dominion Government contributed \$123,000, or about 25 per cent. It is explained that had these people been supported by direct relief the cost would have been something like \$200,000 more than the total amount expended in placing them on the land including cost of equipment.—Toronto Globe.

### Outlook Is Better

The outlook for Saskatchewan farmers for the year 1936 is one of optimism. Good horses are scarce and prices are likely to be high for several years. In the sheep industry prices of lambs and wool promise to be satisfactory. In the market for poultry products the outlook is indefinite but little change is anticipated.

"Prisoner, you are found 'not guilty' and are discharged."

"But I've been kept in custody for a fortnight. Does that entitle me to commit a small crime free of charge?"

## "Boy! I can breathe now!"

Just a few drops of Vicks Vapo-nol up each nostril reduces swollen membranes, clears stuffiness, brings prompt relief. Used in time, helps prevent many colds.

Mrs. Gilchrist, Gifford, was hostess to a meeting of Clayburn Ladies Aid last week.

**VICTORIA PAPERS SUGGEST ISLAND SECEDE FROM B.C.**

Vancouver Island newspapers are featuring a proposal that the Island organize into a separate province. Editor Bruce McKelvie of the Colonist says:

"Vancouver Island could maintain the present social services, pay off the Island's proportion of the public debt at the rate of a million dollars a year, spend an additional million dollars in public works, reduce taxation by three quarters of a million and still have a credit balance of \$300,000."

"We are a much bigger and a more prosperous unit of population than Prince Edward Island at the other side of Canada," comments Comox Argus, "And that tight little island came through the depression far better than any other part of Canada. It's worth thinking about."

Undoubtedly the province would save an amount equal to the revenue received from the Island were government headquarters moved back to the original site—overlooking the Fraser River at New Westminster.

Such an accessibility to the province at large could not but contribute to efficiency and economy, both in time and money in governmental operation. We cannot in this practical age afford the pretentious luxury of governmental administration from Victoria. And it will do the powers-that-be no harm to view from close vantage the operation of such projects as the new toll bridge they so sanguinely forced upon the people.

**CORTES C. ELDRIDGE**  
 Cortes C. Eldridge, well-known Sumas Prairie resident, passed away in Vancouver on Sunday at the age of 90 years. He had enjoyed fairly vigorous health until a few weeks prior to his death.

Mr. Eldridge had operated a farm near Kilgord for 20 years. He came to Vancouver 46 years ago, and was first customs appraiser for the port of Vancouver. Later he entered into the wholesale provision and meat packing business. He was a school trustee in the Coast city for several terms. Mr. Eldridge was born in Foster, Que. Surviving are a son, G. S. Eldridge, and three daughters, Mrs. J. F. Malkin, Mrs. George Hunter and Mrs. Geo. T. Wadde, all of Vancouver. The funeral was held on Tuesday.

### STUDENTS IN FLORIDA GET PRACTICAL GROUNDWORK

Down in Jacksonville, Fla., high school boys and girls are getting training for future jobs out in the community at the same time they are attending school. They go to school part of the day and the other part they spend over in the bank, department store, broadcasting station, hotel, and other business firms, learning practical work right on the job. "It is a real success," one of the teachers declared to The News editor. It is a co-operative venture of the business people in the city and the school authorities, which is known as the Jacksonville Plan, and is now emerging from its experimental stage. This kind of enterprise, aimed to give actual vocational experience to boys and girls before they graduate from high school, is spreading to some of the schools in the community as laboratories of training so that high school youngsters will not go forth on the day of graduation wholly unprepared to fill a job.

**Experience Before Graduating**  
"Yes, I have had experience," a high school girl or boy can now say when he has finished his schooling in Jacksonville and goes out to apply for a position. The plan tends to break down the traditional and long-established handicap of the boy who had to prepare in high school to go to college but then could not go. The majority of the boys and girls leaving high school today cannot go to college, yet their training is directed toward that goal. The result is that when they apply for a job, the employer asks, "What can you do?" The answer is "I don't know, but I can try anything."

But have you had any training for this kind of a job?" the employer insists.

#### A Contrast In Answers

Then about all the prospective employee, the young high school graduate with diploma in hand can say is something like this, "No, but I have a good education. I have a lot of good sense, and I am willing to work. If you will only give me a chance, I will learn, and I am sure you will be pleased." The world is full of these kind of graduates.

Contrast this answer with the one the graduate from the Jacksonville plan can give. He says, "Yes, sir, I have had two years experience work-

### MATSQUI HALL DEBT FREE; GOOD PROGRESS MADE IN '35

A very successful year, both financially and socially, was reported at the annual meeting of Matsqui Hall Association, held recently. Over \$700 plus the interest was paid off during 1935, and the hall is now entirely free of debt. Approximately \$1609 was handled during the past year.

Officers were elected for the present year as follows: E. Kerr, president; A. H. Rottluff, vice-president; W. Kunzmann, secretary-treasurer; W. Adams and A. Rottluff were re-elected as directors and D. Lancaster was elected to the directorate.

### YOUNG SON OF FORMER SUMAS REEVE FALLS UNDER A PLOW

Falling under a moving plow, James the 4½-year-old son of Mr. and Mrs. C. A. Lamson, Upper Sumas, was painfully injured last week and brought to the local hospital. Apparently the child was playing around the tractor-drawn implement when the accident happened, and when picked up it was at first thought the boy was dead, as the plow passed over him. At the hospital he was found to have sustained broken ribs and severe bruises.

ing in a bank. I have been moved around until I know many branches of the work". Or, "Yes, sir, I have two years' experience in an auto-mechanics shop. I can repair cars, make out orders for more parts, and do many things around the shop".

These high school graduates in the co-operative vocational department in Jacksonville high school are literally making jobs for themselves. Although no employer is allowed to persuade a vocational pupil to stop school and accept a job while he is in training, because of an agreement between the business men and the school authorities, after the boy has finished high school he has had such good experience in most cases that he can suggest a place in the business where he can be useful.

#### 86 Per Cent Found Employment

Since the inauguration of the plan about two years ago, approximately 86 per cent of the vocational pupils have been placed in jobs. They are getting their practical work out in 53 different types of training positions in the community. Some of the students are in broadcasting stations, dry cleaning establishments, dentist offices, police department, photographic shop, tea rooms, theatres, department stores, insurance offices, hotels, radio repair shop, advertising office, and other businesses.

One big advantage claimed for the Jacksonville Plan is that it broadens the whole base of vocational training. Whereas a few manual training shops in a high school tend to be very expensive, and only train a few in a limited field, the opportunities are far greater when the whole community opens up its shops and businesses as laboratories with modern equipment and methods put at the disposal of the school authorities.

Furthermore, there is far more interest in the schools by the leaders in the community, it is found. When a business firm has a boy or girl in training at its establishment at once there is a more cordial feeling and a pride and interest in the school where that boy or girl spends the rest of the day.

The Jacksonville Plan is considered an answer to the demands of the public for a practical system of education that will discover and develop the latent powers bound up in the individual child.

#### Practical Education Provided

One of the tenets of modern education is the recognition of public education as a co-operative enterprise. The integration of the business world and the school for the expansion of the individual and the good of the society as a whole is demonstrated in the Jacksonville Plan. It brings education and industry into closer relationship by providing high school pupils with a practical and, at the same time, cultural education, putting into actual practice the theories of guidance set forth.

Not only is there a great diversification of types of work offered in the community, but each business firm contracts to allow the vocational student to move around from time to time in many different parts of the business, so that each pupil also gets a diversified training. In fact, the school authorities go in and help to make up a course of training for the practical job.

But it must not be forgotten that when John or Mary, the co-operative vocational student, leaves high school he is not compelled to go to work. He can still go to college if he chooses. What has actually happened, in a nutshell, is that he has taken all of his required college preliminary subjects and has substituted for his elective courses this practical training in industry.

The pupil starts on his co-operative vocational training at the beginning of his junior year and spends four hours a day, five days a week, in practical work outside the high school, the parents agreeing to leave him in training until he has finished school. The other four hours each day are spent in academic and related studies. The plan insures to the graduate a definite vocational training in a specific occupation and a high school diploma, without closing his education at too early an age.

## Dollars Saved Are Dollars Earned!

EVERY year your family, and every family of your acquaintance, spends about 70 per cent of its income just for living, exclusive of rent—so economic experts tell us. Think what this means—seven dollars out of every ten invested in food, clothing, household utilities and all the multitude of things that keep a family comfortable and happy.

That part of spending is readily understood. But do you realize that every manufacturer and retailer of these necessities is planning how he can get your dollar?

It's a big job to spend so much money wisely and well. It requires careful business methods to get the best possible returns from each dollar that leaves the family purse.

The clever woman goes for help to the advertisements in her local paper. There she finds a directory of buying and selling. She learns about the offerings of merchants and business people. She compares values. She weighs quality and price. She takes this opportunity of judging and selecting almost everything she needs to feed, clothe, amuse, instruct and generally bring up her family.

Read the advertisements! You will find them willing and able to serve you in the business of purchase.

ADVERTISEMENTS ARE GUARDIANS OF YOUR POCKETBOOK READ THEM CAREFULLY!

## The Century Of Science

Research work now being carried on in the laboratories of the world devoted to industrial progress and advancement of scientific knowledge is unlocking vast reservoirs of hitherto hidden facts and data to such an extent that their practical application to man's needs and welfare is bound to profoundly change habits and modes of life and work in the future.

Old and well accepted theories in the realms of astronomy, chemistry, physics, medical science, biology and other fields of science are being shattered almost daily as a result of the work which is being carried on by silent, be-spectacled men and women in these research workshops and so rapidly are new discoveries being made and converted to the use of mankind that those who predict that the present century will go down in history as an era of scientific achievement are speaking with undisputed authority.

In fact, the achievements of the first third of the present century are sufficient in themselves to substantiate the claim for such an assertion even if, for some unknown and unpredictable reason, the work in this field were to be brought to an abrupt halt now.

One does not have to search far to find reasons for this remarkable advance into the sphere of the hitherto unknown and to explain why so much that has remained hidden for centuries is now being revealed in so great abundance.

One of the reasons is the large sums of money which have been made available for the prosecution of such work by wealthy philanthropists. Another is the discovery by commercial organizations that it pays them to devote a percentage of their earnings to the conduct of research work to assist them in unearthing ways and means of improving their products and of reducing the costs of production to enable them to achieve a paramount place in their field or to achieve it. Another is the now well known fact that almost every new discovery, or the search for it, opens the door for another one and often enough paves the way for several more. Thus, the work is not only progressive but cumulative and in more than mathematical ratio, something like rolling up a snowball.

Still another reason is the fact that so frequently, a discovery in one field of endeavor results in the perfection of new equipment which makes it possible to delve deeper into the mysteries of some other scientific realm or some other school of activity.

And these do not exhaust the reasons. There are others referred to recently by Mrs. O. Lazarus. Writing in a recent issue of the Christian Science Monitor an article dealing with developments in the arena of natural science this author said:

"Natural science arose partly out of man's desire to conquer nature and partly from his insatiable curiosity. From the earliest times man had never been content to live by bread alone. It had that within it which impelled it to seek out the mysteries of the world around. It is this curiosity which has forced men to make instruments which have enabled him to sweep the recesses of the starry heavens; to delve among the rocks in order to read from them the history of the earth and those who have lived on it in ages past. In his eagerness he has even penetrated into the heart of matter and seen it dissolve into radiation."

The same writer sheds an interesting sidelight on the effect such work has on the minds of those who make new discoveries, when she says: "Every time he (the research worker) has forced open the locked doors in the Palace of Knowledge, he has become humbler, less certain of his at-one-time unshakable faith in the 'reality' of those things which his hands could touch and his eyes see."

It is unfortunate that in Canada sufficient recompense is not always given to the men and women who are devoting a lifetime to unlocking the mysteries of science for the benefit of the country and her people; at least, that is too often the case with those who are prosecuting their work under government aegis. As a result, more adequate remuneration sometimes proves too tempting and they are lured away south of the international boundary to the great loss of this country.

When the benefits which accrue to the country as a result of the development of a rust resistant wheat—to quote an illustration—are weighed in the balance against the remuneration these trained experts receive it is not surprising if better offers from elsewhere for their services are sometimes accepted.

### Talked Through His Hat

New York Man Had Radio-Equipped Silk Topper

An announcer wearing an "electric Easter bonnet", in the form of a radio-equipped silk hat, promenaded with the Easter Sunday strollers in New York, describing the fashions and eavesdropping on conversations unbeknown to those on the sidewalks. The stunt provided a test of a new portable microwave "station." The range of the silk-hat broadcaster is about a quarter of a mile.

The human hair grows at an average rate of five inches a year in a temperate climate.

### CONSTIPATION STOPPED AT ONCE!

"Constipation troubled me for months. Nothing seemed to do any good until I tried Fruit-a-tives. They brought quick and complete relief," says Mr. Huddleston, Belleville, Ont. Fruit-a-tives are the discovery of a famous Canadian physician. He concentrated extracts of APPLES, ORANGES, FIGS, PRUNES and HERBS. The result is a natural remedy scientifically prepared for best results. Convenient—an easy-to-swallow tablet. Safe—do not contain harsh purgatives or habit-forming drugs. More than a laxative—Fruit-a-tives bring lasting relief. They tend to strengthen all organs of elimination. Their tonic effects help the entire system.

**Fruit-a-tives**  
A FAMOUS DOCTOR'S PRESCRIPTION

### Enjoys Life At Goldfields

Well-Worth Trying Says Wife Of Resident Doctor

Completing her first season in one of the north's new mining camps, Mrs. E. N. Dunn, a bride of one year, says there is nothing like joy-riding in a dog sleigh.

The young woman, wife of Dr. E. N. Dunn, resident doctor at Goldfields, Sask., accompanied her husband to the Lake Athabasca mining field last fall.

During a brief stopover at Edmonton after a long aeroplane flight from the northern mining town, she said, "I enjoy the life very much. It's all very novel, and it's well worth trying."

Goldfields has a pleasant social life, she added. About 30 women and 300 men comprise the camp. Bridge, dancing and dog sleigh riding are in great favor. In addition she often travels with her husband.

### Returns Show Increase

Returns for the 1935 Christmas seal campaign to raise funds to fight tuberculosis were encouraging and final receipts were expected to show a 10 per cent. increase over 1934, the Canadian Tuberculosis Association announced. The association will hold its annual meeting at Vancouver, June 22, 23, 24.

Soviet workers are boring an oil well on the sea bottom in the vicinity of Baku.

### Going In For Ice Cream

London Is Preparing For Big Sale This Summer

Warm weather ice cream fashions are being determined at the Ice Cream and Dairy exhibition at the Crystal Palace, the London News-Chronicle remarks:

"This summer, it seems, we shall consume at least 50,000,000 gallons of ice cream, so that the rehearsal now in progress is thoroughly justified."

"It will be bought from penny-in-the-slot machines, in special paper bags, in tubes of chocolate and in new waffle wafers, which make it look as if you get more for your penny than you actually do."

"And it will be better ice cream. The milk marketing board has arranged for ice cream manufacturers to buy milk at bulk wholesale prices. Milk powder from abroad has been widely used so far."

"The immense engineering industry that has grown in recent years to meet the needs of the big milk distributive combines should give those now engaged in the milk prices inquiry some idea of where the money goes."

### Richly Clad Mummy Found

Is Believed To Be Daughter Of Great Pharaoh Cheops

The sumptuously-clad mummy of a princess of the Fourth Dynasty (3733-3566 B.C.), believed to be the daughter of the great Pharaoh Cheops, who built the second Pyramid, has been discovered by Egyptian archaeologists.

The mummy lay in a limestone sarcophagus, in an undisturbed tomb whose location was not revealed in the announcement of the find. Dressed in bridal raiment, the princess wore a golden diadem, two necklaces of golden beads, anklets and sandals.

A gold-plated copper belt circled her waist and the fingers of her left hand were encased in gold as well, it was said.

Prof. Selim Hassan of Cairo University, directed the excavations which resulted in the discovery. He said the tomb apparently had never been pillaged by marauders, like most monuments of ancient Egypt.

### Welsh Discovered America

Landed 300 Years Before Columbus Made His Appearance

The legend of the white Indian, and the claim that America was discovered by a Welshman, were revived at Cardiff, Wales, recently during a Welsh book festival, when books relating to the part played by Wales in world history were exhibited.

Legend has it that the American continent was discovered by Prince Madoc in the twelfth century, 300 years before Columbus. Madoc set sail from North Wales across the Atlantic with a fleet of 13 ships and never returned.

It is declared that he landed near the mouth of the Mississippi and worked his way inland. His men made friends with the Indians, and ultimately formed themselves into a tribe of white Indians.

### Broadcast In Eskimo

Bishop Of The Arctic Talked To Charges In The North

A bishop's voice rang through the air for thousands of miles on a recent Saturday to carry a greeting in Eskimo to slant-eyed friends who sat before radio sets from the sub-Arctic fringe to Oache Peninsula. Rt. Rev. A. L. Fleming, Bishop of the Arctic, whose Diocese extends across the great expanse of winter's twilight land, spoke in English and Eskimo to his friends and charges in the north, broadcasting from Ottawa on the Canadian Radio Commission's Northern Mission program.

### Likes Exploring Job

Ellsworth Hopes To Do More Of It In Antarctic

Lincoln Ellsworth, who recently completed an air journey across the Antarctic continent, said he would like to explore the Australian desert by camel. He had no definite plans, however, for the venture.

Ellsworth said in an interview there was a 100-year job of exploring still to be done in the Antarctic and he expected to do some of it.

The explorer landed in Los Angeles in March after an absence of almost a year.

John D. Rockefeller says that the first money he ever earned was made by raising turkeys when he was seven years old. His mother gave him curds from the milk to feed them.

## Do You Ever Wonder

Whether the "Pain" Remedy You Use is SAFE?

Ask Your Doctor and Find Out

Don't Entrust Your Own or Your Family's Well-Being to Unknown Preparations

THE person to ask whether the preparation you or your family are taking for the relief of headaches is SAFE to use regularly is your family doctor. Ask him particularly about "ASPIRIN."

He will tell you that before the discovery of "Aspirin" most "pain" remedies were advised against by physicians as bad for the stomach and, often, for the heart. Which is food for thought if you seek quick, safe relief.

Scientists rate "Aspirin" among the fastest methods yet discovered for the relief of headaches and the pains of rheumatism, neuritis and neuralgia. And the experience of millions of users has proved it safe for the average person to use regularly. In your own interest remember this:

"Aspirin" Tablets are made in Canada. "Aspirin" is the registered trade-mark of the Bayer Company, Limited. Look for the name Bayer in the form of a cross on every tablet.

**Demand and Get "ASPIRIN"**

### New Electric Trains

One Of Longest Electric Tracks Will Be Completed Next Summer

Rapid progress with the electrification of the Southern Railway's main line to Portsmouth harbor makes it likely that the whole scheme, costing nearly \$15,000,000, will be completed by July, 1937.

Some 95 route miles, corresponding to 242 single track miles, are to be converted, and when finished the 74 miles from London to Portsmouth will be one of the longest electric tracks in Britain.

The present longest stretch is the London to Eastbourne, Hastings and Ore section opened last July.

Forty-eight new four-coach motor units, 19 of which will be provided with kitchen-cars, are among the new rolling stock being constructed.

### Tourists Will See Things

Parry Sound, Ontario, To Have Totem Pole Traffic Light

The eyes of a moose, alternately blinking red and green from atop a mighty totem pole, will help direct tourist traffic through Parry Sound, Ontario, this year. Plans for the totem pole traffic light were explained to the Ontario Good Roads convention by J. M. Daly, Indian agent from Parry Sound. The pole will be a vast affair, facing the highway, and the images carved on it, from top to bottom, will include the moose, a bear, a deer, two geese, duck, an early Canadian voyageur in a canoe, a tepee, a school house, and a church. The eyes of the moose, co-ordinated with traffic signals, will be the only animated portion.

There are approximately a half million different sorts of living creatures on the earth. About three-fourths of this number are insects.

European red ants attack other species of ants and carry off the workers as slaves.

### Trying Old Experiment

New Jersey Doctor To Use Surgical Grafting Principle

Sixteen-year-old John Seeley's hope for artificial restoration of the arms he lost last November under the wheels of a train at Nutley, New Jersey, rested to-day on application of a 65-year-old surgical grafting principle.

A Newark orthopedic surgeon, starting with an operation at Beth Israel Hospital, expects to apply the discovery of an Italian physician, Vanghetti, about 1870, using muscle grafts to connect artificial limbs.

The surgeon, who has asked his name be withheld, has been engaged by the crippled children's committee of the Nutley Elks Lodge. As he described the operation, a flap of the patient's skin is drawn into a tube and inserted under the muscle. This operation will be performed twice on each of the stumps of Seeley's arms.

When the tissues have healed, he said, cineplastic arms would be attached to the flaps. The artificial arms and fingers then would be operated with the flexing of the muscles.

### New Device Invented

Artificial Ear Gives Effect Of Sound On Human System

An artificial ear, for the exact measurement of sound, and its effect on the human system, has been invented by an electrical firm at Prague. It is to be used by the Czechoslovak Ministry of Health in its investigations into the noise problem. Previous sound-measuring devices are stated either to have been too subjective, which has led to inaccurate results being obtained and difficulty in calculation, or they have not measured the true effect of various sounds on the delicate mechanism of the human ear. The new device, it is claimed, represents exactly, in an easily measurable form, the way in which sound affects the ear of a living person.

### Ships Without Funnels

Prediction Made That Smoke Will Be Discharged Into Sea

Funnelless ocean liners in the near future was a prediction made by John Johnson, chief engineer of the Canadian Pacific Steamships, Ltd., addressing the Institution of Mechanical Engineers at London, England, recently.

Speaking on the future of steam propulsion, Mr. Johnson said that smoke and gases from the furnaces would be used until they were almost cold, the heat extracted from them being put to work.

The gases would then be washed with sea water, and, when clean, they would be discharged into the sea just above the water level.

### His Only Worry

The doctors had great difficulty in getting a negro soldier, who had been badly wounded by shell-fire, to take an anaesthetic. He seemed worried about something, and urged them to get to work without an anaesthetic, as he wanted to watch them.

At last they got him to take the chloroform, and all went well until the operation was over.

The stitching was just being begun when he jerked himself back to consciousness and said: "Doctor, don't make a mistake. Don't stitch me with white thread."

### Animal Day In China

In observance of Animal Day in China recently not an animal was killed in the country for 24 hours. All slaughter houses remained open but not one head of live stock was taken in and cities refused to do away with strays in pounds. The Society for the Prevention of Cruelty to Animals gave open-air dramatic and oratorical messages on kindness to dumb beasts.

# Moisture Conditions Are Back To Normal In Western Grain Belt

Despite the severity of the winter, Manitoba has only received normal precipitation, according to figures contained in statistics prepared by the Dominion meteorological office, covering the period, Aug. 1 to Feb. 29.

The same source reveals that throughout the grain belt of the Canadian west moisture conditions are about back to normal. Alberta leads with a five per cent. average increase over normal, Manitoba is next with normal conditions and Saskatchewan is next with a deficiency of one per cent.

Northern areas of the three provinces fared best as far as rainfall was concerned.

Alberta's excess over the average was mainly due to abundant moisture in the north of the province from Manitoba district to the Peace River. This great area was the wettest in the west with an increase of 33 per cent. over the normal. Moderate gains were registered in northern and southeastern Saskatchewan and western Manitoba. On the other hand distinct losses were shown in southern Alberta and southwestern Saskatchewan.

A notable feature of the distribution of precipitation was the large excess in October and November in northern Alberta and northern Saskatchewan. A large portion of this was probably frozen into the ground and is now available for the spring crop.

In southern Alberta and southwestern Saskatchewan rainfall in October and November was above normal, while central Alberta and southwestern Saskatchewan had nearly normal moisture, but moderate excesses in November. Throughout Manitoba the precipitation in these two months was below the average.

Summarizing the records by months, it is seen that in northern Alberta precipitation was above normal in every month except September, when there was a deficiency of 50 per cent. In both October and November decided increases were reported. Central Alberta had small losses in every month but November and January; in the latter month more than twice the normal amount of precipitation occurred. The southern section of the province experienced a big crop in August and September, but more than twice the ordinary amount of rain fell in October.

In northern Saskatchewan, changes from the average were quite small, except in November, when 70 per cent. and 60 per cent. excesses occurred, respectively. The southwest had a poor showing except in November, when a 25 per cent. increase was recorded. Southeastern Saskatchewan was more fortunate with above-normal precipitation in August, November, January and February.

Throughout Manitoba, rainfall was about 60 per cent. above normal in August, but was well below in September and October. The other months showed nearly normal precipitation in western Manitoba, while the eastern part of the province had about 30 to 35 per cent. below normal fall in November and December and 25 per cent. excess in January and February.

## British Speed Records

### Train That Was Late Set New Fast Time

It was revealed recently that in a remarkable dash to make up time, the Bristolian express from Bristol to Paddington made an outstanding run.

The express left Bristol eight minutes late at 4:38 p.m., but arrived at Paddington at 6:15 p.m., only one minute after its scheduled time, having covered the 117 1/2 miles in 98 minutes at an average speed of 72 miles an hour.

The fastest speed on British railways is the L.N.E.R. Silver Jubilee's 112 m.p.h. achieved last September during a run between Newcastle and London.

## Use For Walnut Shells

Industrial use for walnut shells—a final step in eliminating waste from commercial shelling operations—has been announced. California Walnut Growers' Association engineers and chemists said the most important of 15 uses found for ground walnut shells are in hard and soft rubber compounds, asphaltum linoleums, roofing paper, filler in dynamite and abrasive mechanics.

## Certified Seed Potatoes

### Good Ones Cannot Be Selected By Tuber Appearance Alone

With the increasing prevalence and number of diseases of potatoes and the greater risk in purchasing seed about which nothing is known by the purchaser, has come the realization that the production of high class seed requires special care. A very satisfactory system of seed potato certification has been developed in Canada by the Division of Botany, Central Experimental Farms Branch, and is based upon two field inspections of the growing crop, and of the tubers after harvest. Only seed potatoes which meet the standard for certification are eligible for sale as Certified Seed, and official tags are supplied for every package of such seed. Therefore, if the Government tag is not on the package, the potatoes are table stock only and seed price should not be paid. There are two grades only of seed potatoes, "Certified Extra No. 1" and "Certified Small Sized 1 1/2-3 ounces." If the tags do not specify either of these grades, the potatoes are not seed potatoes.

There is definite need of field inspections for seed potatoes as certain virus diseases are not observable in the tubers and can only be identified in the growing plants. Obviously only low yields can be expected from diseased plants. It is a big mistake to conclude that good seed potatoes can be selected by tuber appearance alone.

There are no regulations in effect which prevent anyone from using any kind of potatoes for seed purposes, and some of the stores are selling table potatoes in their seed departments, but it is the purchaser's privilege, if he pays more than regular table stock prices, to demand the official tag, otherwise he may get only table stock.

Well over a million bushels of certified seed potatoes have been sold annually for the past nine years. The bulk of the seed produced is exported. The best potato growers in other countries appear to appreciate the value of good seed and in spite of plentiful local supplies will pay the additional freight and tariff charges to secure Canadian Certified Seed potatoes. Growers are advised to secure their supplies immediately as seed stocks are getting very low. Lists of growers having seed for sale are obtainable, free, from the Dominion Botanist, Central Experimental Farm, Ottawa.

## Donkey Has Queer Taste

### Pet Of Late Princess Victoria Will Eat Cigars

A donkey which eats lighted cigars and cigarettes, or any sort of tobacco, now lives in retirement at Coppins in Iver, England, the home of the late Princess Victoria. His name is Dinkie.

For many years—ever since she went to live at Iver—Dinkie had been a pet of the Princess. At times she used to go to his paddock to give him an extra special feed of sugar and carrots. Since the princess died recently he has missed those occasional tidbits given to him by her own hand.

The King, too, knows about him, for he has often seen Dinkie grazing contentedly in a paddock on the Coppins estate.

"Dinkie will eat any tobacco you like to give him," one of the members of the staff at Coppins said. "It is not true that he smokes cigarettes—that is an exaggeration. What happens is that if you put a lighted cigarette between his lips he will eat it without hesitation."

When a reporter tested him by offering him a cigar, Dinkie was obviously pleased. He sniffed the cigar, and before anyone could offer him a light, it had disappeared into his mouth. A lighted cigarette went the same way.

Nobody knows Dinkie's age, but it is certain that he is over 30. Although he has lost nearly all his teeth, he looks fat and well.

## Exports To French Africa

Wheat, flour, and farm implements are among the leading Canadian exports to French Africa. The area of French possessions in Africa nearly equals that of the Dominion of Canada. The population is over 32,000,000, of which more than 1,000,000 are of European origin.

Raccoons like to wash their food before eating.

# The SNAPSHOT GUILD

FIRE AND SMOKE MAKE VIVID PICTURES

Amateur cameras blazed away at these two fires. A time exposure of 3 seconds was used for the picture of the night fire (left), with the lens set at f.8; a 1/25 second snapshot speed for the day fire, also at f.8.

For drama and action take your camera along to the next good fire in your vicinity. Nothing offers the alert snapshotter a better opportunity for vivid, interesting pictures. Day or night, it doesn't matter, and be at the fire as early as possible. Don't forget a couple of extra rolls of film, else you will return regretting scenes you had to miss for lack of ammunition.

Think what you have to "shoot" at. Billowing smoke with its weird formations, the glistening streams of water rising aloft from the firemen's hose, the firemen putting up their ladders or precariously perched on them as they play their hose into windows belching with smoke and flame, the street turned into a lake and reflecting the action, silhouettes of the fire engines, the tangled hose lines, and later perhaps the gaunt ruins.

Chances are best, of course, in the daytime, but at night, although you get less detail, your pictures are likely to be more spectacular. You work by the light of the flames.

Their "lurid glare" from behind windows or as they shoot skyward from the roof becomes a reality on your film. You get mostly silhouettes, but just the same they tell you vividly the dramatic story of "Fire!"

With a tripod, or with the camera held on some solid support, time exposures of night fires are easy; without a tripod or some support, super-sensitized film will be needed if you are to get the spectacle in a snap. With a fast lens (f.6.3 or faster) you can make 1/25 second snapshots of brilliant blazes.

Some amateurs are regular "fire bugs." They make a hobby of fire pictures and at every alarm dash to the scene. They climb trees and scramble up porches and roofs for viewpoints, slip through police lines for "close-ups" and do other perilous things in their enthusiasm. But one doesn't have to take chances. There are always good pictures at a good fire from any point of view. "Clang! It's a triple alarm! Gimme my camera!"

JOHN VAN GUILDER.

## Will Give Up Battle

### Federal Government Finds Atlantic Again Menaces Lighthouse

The federal government is still losing in its 137 year old battle with the Atlantic to keep a light burning on that dangerous stretch of North Carolina shore known as Cape Hatteras. For the second time it has been forced to abandon its lighthouse there, the tallest, the most famous, and perhaps the most beautiful in the country.

The first tower, 112 feet tall, was built deep inland in 1799. But year by year the ocean eroded the Hatteras beach and approached closer and closer to the tower. In 1870 this light tower was abandoned. A new brick tower, 193 feet high, was built farther back, a full mile from the sea. But since then the sea again has eaten almost to its base. The ocean is now less than 100 feet away.

It is planned to leave the lighthouse stand; one day it will be claimed by the sea. A new steel tower will be put up a mile farther inland.

The Chinese Imperial cookbook contains 96 volumes and weighs a ton. It is said to be the largest cookbook in the world. An abridged edition of the same work contains 18 volumes.

## Protecting Rare Bird

### Egret Is Guarded In Florida During Nesting Season

The "egret guard" is on duty again in the Florida everglades. The department of agriculture at Washington has mobilized all game agents in the Florida district for the annual watch over the bird during its nesting season.

The egret, whose white, silky plumes are ranked in value with the feathers of the bird of paradise, was, in 1914, in danger of extinction. Plume hunters slaughtered them ruthlessly until the Audubon Society obtained federal legislation protecting the bird. The law makes the wearing of egret plumes a misdemeanor.

## Objected To Crowd

It got too crowded for Mr. and Mrs. Bill Hammersley, who operate a trading post at Iguigig, Alaska. When several families moved into the district recently, the Hammersleys decided the population was getting "too dense for comfort," and moved to Kukaklek Lake, where there isn't a white family within 100 miles.

Air-mail time between Shanghai, China, and London is now 11 days.

## Cross Stitch Offers a Dutch Treat

## PATTERN 5405

At Breakfast or Lunch-time you'll gaze with delight at this spirited Dutch pair, Hulda and Hans, embroidered on your dainty cloth. It's such an easy way to make your breakfast-nook gay, for the four motifs are quickly done in easy 8-to-the-inch cross stitch on curtains, cloth, scarf or pillow. You can do them in one color or many—it's a grand way to use up scraps of floss. If you haven't the Dutch towels, companion pattern 5268, you'll want to send for it too.

In pattern 5405 you will find a transfer pattern of four motifs averaging 7 x 12 1/2 inches and four motifs, 2 1/2 x 3 inches; color suggestions; illustrations of all stitches needed; material requirements.

To obtain this pattern send 20 cents in stamps or coin (coin preferred) to Household Arts Dept., Winnipeg Newspaper Union, 175 McDermot Ave. E., Winnipeg.

There is no Alice Brooks pattern book published

# Founders Of World Poultry Congress Have Realized Their Hopes

## Would Revise Place Names

### But Idea Might Not Be Acceptable For Communities

A writer argues for better sounding and more significant place-names in Canada than he evidently feels now exist in a number of cases. He suggests the creation of a Canadian Nomenclature Society to help in the work.

Says this writer in part: "Many places in Canada possess assets in the significance, in the euphony, in the association, history, romance, in the general outstanding individuality of the names they are known by. In each of the provinces there are cities, towns, villages, rivers and streams whose names are an imperishable link with the past, with the romance of the pioneer, with aboriginal lore, with tradition. But at the same time a lot of our names are as flat, commonplace and insipid as a bran-mash dessert—cheap, plain and even derogatory, in the sense of inspiring sarcasm or scorn."

This writer may feel that communities such as Moose Jaw and Medicine Hat might welcome suggestion about a change of name. On the other hand, would they? They might be as mad as a bull about it. The names they have may suit them even if on occasion they may provoke wonderment in some quarters.—Regina Leader-Post.

## New Diagnosis Of Disease

### Electrical Quality Found In Human Body To Be Used

New progress in the use of an electrical quality of the human body for diagnosis of disease was announced at the Massachusetts Institute of Technology.

This quality is called "Q". It is related to the manner in which the body tissues conduct an electrical current. It is easily defined as the relation between the energy stored momentarily by the tissues and the energy lost by heating the tissues.

Dr. J. Warren Horton, research associate, has invented an instrument by which these two quantities may be read on dials. It measures the current conducting characteristics of the internal tissues although it is connected to the patient by electrodes in contact only with the surface of the skin.

British investigators, prior to development of this instrument, had believed measurements of "Q" might be substituted for the present basal metabolism tests. Results with the new tech meter indicate this is probably not the case but after further study, "Q" may prove eventually to be a valuable indicator for various bodily conditions and thus be of great aid in medical diagnosis.

## Popular In England

### British Publication Says Canadian Turkeys Hard To Beat

In the British Fish Trades Gazette, published in London, England, one of the leading publications dealing with the produce trade, there has appeared recently several commendatory articles on Canadian agricultural products, principally with reference to Canadian poultry. In its issue of 7th of March, 1936, one of its writers states:

"The class of turkeys which are arriving from abroad—that is, the fresh killed varieties—are very good. Apart from these we shall no doubt have some Canadian birds on show, and as you know, a good Canadian turkey wants a lot of beating if it is the right quality and pack."

"To sum up the turkey trade, I consider that the most reliable pack to which to look forward during the next few months will be the Canadians if they can be shipped at a reasonable price. Present quotations are rather beyond the reach of the trade, but holders on the other side may think differently in a few weeks' time."

If there is one thing we ought to encourage to-day, it is the old-fashioned idea of self-reliance. Many people to-day have slipped too easily into the rut of dependence upon others.

Certain plant diseases are found to increase and decrease in cycles during periods of years, a discovery which will aid in the farmer's fight against them.

The diamond was used in the ancient world as an antidote for poison.

The question is often asked "What are World's Poultry Congresses and what is the big idea behind them?"

In view of the forthcoming World Poultry Congress which will be opened on July 24th at Leipzig, Germany, no better answer can be given than by quoting an extract from an article appearing in the Leipzig press, written by a Canadian, F. C. Elford, Dominion Poultry Husbandman and Past President of the World's Poultry Science Association. "World Poultry Congresses" states Mr. Elford, "are the triennial meetings of the World's Poultry Science Association which was founded in 1912. The Congress in Leipzig this year will be the sixth. The other five were held at The Hague, Holland in 1921; Barcelona, Spain, 1924; Ottawa, Canada, 1927; London, England, 1930, and Rome, Italy, 1933.

"There were at least two good reasons in the minds of Sir Edward Brown and Professor J. E. Rice (two of the originators) when they debated the formation of the World's Poultry Science Association and later the Congresses. One reason was to further international information upon poultry matters; the other reason was to encourage world-wide acquaintance and good will. Both of these objectives have been attained beyond the highest hopes of the originators. The number of countries represented in the membership of the Association and in the attendance at the congresses demonstrate this.

"World poultry congresses are not merely 'poultry shows'; they are world gatherings where more countries have been represented than at any similar event. At the congress in Canada in 1927, delegates from 43 countries were present. In England in 1930, more than 60 nationalities were represented. Accredited delegates to these congresses number thousands and the local attendance in some cases is reckoned by hundreds of thousands. The reason that so many countries send delegates to these congresses may be that poultry is universally accepted as an economic asset and touches the lives of so many people that every country desires to know all there is to be learned of the science of breeding, feeding and marketing. The Congress sessions, at which the world's most distinguished scientist are heard in lecture and debate, bring out the latest research in poultry culture, while at the same time the national and live bird exhibits demonstrate visually the degree of application of science that has been made in the various countries."

## Job Was Thorough

### Carpet Snakes Eliminated Rat Pest From Tropical Island

Thursday Island, off the Cape York finger of northeastern Australia, was, until recently, a tropical, palm-girt spot on the map "where every prospect pleases and only rats are vile."

These rats have lately been a perfect pest, especially to the shipping company which owns the wharf and its store. Cats were taken on the staff and were paid 84c a week in catmeat currency. They did almost Hamelin service, but not quite, according to the Australian Press Bureau.

Then two large carpet snakes were appointed with board, lodging and other emoluments. By day they slept in the rafters of the store; by night they worked.

In an incredibly short time every rat disappeared. So, now, have the snakes. No one knows where, but Thursday Island has deleted the "only" from its pleasing prospects.

## Excitement For Passengers

### Zoo Animals On Ocean Liner Stage Big Fight

Passengers leaving the liner Excalibur at Boston told of a death battle on the ship between a 400-pound hippopotamus and a pigmy elephant from the Belgian Congo. It ended in the death of the elephant. The hippopotamus was recaptured.

Roars of the hippopotamus and trumpeting of the elephant awakened the passengers early one morning as the ship passed through a storm. Eight native boys from the Congo, hired by a representative of the United States, finally trapped the hippopotamus after four hours. The boys were unable to approach the hippopotamus until the elephant had been slain.

## BRADNER MAN DIES AFTER ACCIDENT ON HIGHWAY

Inquiry into the death of John W. Rose, 64, of Bradner, who was fatally injured in an automobile accident on Sumas lake highway on Saturday night, was conducted by Coroner Edwin Eacrett in the Henderson parlors yesterday. The court decided, beyond identification and other preliminaries, to adjourn the inquiry until evidence can be obtained from Jack Holmes, 35, of Vancouver, who is confined to the local hospital recovering from injuries sustained in the accident. Holmes was riding a motorcycle upon which Rose was a passenger, when he collided with a car driven by Gordon D. Reid, 18, of Chilliwack. Reid faced a preliminary police court hearing in Sumas on Monday. The case was remanded for one week, and his bail set at \$5,000.

Holmes' condition is uncertain. It was found necessary to amputate his left leg after the accident.

The accident happened just east of Kilgord road.

Rose's funeral arrangements are in the hands of the Eagles order of Vancouver.

The coroner's jury comprised C. F. Weir, A. R. Gosling, I. R. Serl, Glenn Rudge, Wm. D. Cook, J. Heath.

Hospital Day is dated for May 12, and will be observed throughout the Dominion. Tea is to be served in the afternoon at the M.S.A. hospital. Donations will also be gratefully accepted.

## SPORT SIFTINGS

Quite a number of local enthusiasts saw the big guns of hockeydom in action in Vancouver last week when the Toronto Maple Leafs and Chicago Black Hawks played a series of games.

Heavy downpour of rain Sunday morning caused postponement of the opening game of the softball season until later in the week. The two Abbotsford teams played a "friendly" game Sunday afternoon. Play was very good and even, the Legion squad leading right up till the last of the ninth inning, when a nice hit by Conway drove the tying and winning runs across the plate.

A steady downpour of rain of Tuesday caused a further postponement of the opening game of the softball season, which will (weather permitting!) be played on Thursday evening.

## MISSION TAKES FIRST PLACE IN HIGH SCHOOL TOURNEY

Mission high school won the inter-high school track meet, held in Abbotsford on Saturday, by over 30 points. Other schools participating were Matsqui, Mt. Lehman and Sumas-Abbotsford.

Kathleen Webster won first place in the hop, step and jump, and second place in the softball throw and in the broad jump. Thelma Nelles made a good showing in high jump, as did Dorothy Duark in the foot races. In the junior shot-put Fred Wahlman carried away first honors by a margin of several feet, and Harry Buker's

height proved a distinct advantage in the high jump. Wilfred Pattenenden achieved second place in the junior 100 and 220 yards, while William Waterston showed promising versatility by creditably participating in several of the events, winning in a jump and coming second in the pole vault. Glenn Fadden also showed good form.

The event was postponed from the previous week because of rain, and did not entirely escape occasional showers.

**Fined \$25; Given Blue Card In Dangerous Driving Conviction**  
Joseph Nadalin of Vancouver paid a fine of \$25 and costs in Matsqui police court on dangerous driving charges. Magistrate Bell, when imposing fine and issuance of a blue card, (with option of 30 days in jail), said he intended to cancel the driver's license in the next conviction upon a similar charge in his court.
